Security solutions for the 'New Normal'

Contactless Readers & Touch free buttons - A hygienic and smart way to control access in or out of a door, gate or barrier. Individual Fobs can be programmed to only provide access to authorised areas.

Occupancy Management - Set and control the maximum number of people in any given area. See live occupancy levels in a clear, web-based visual report. Supporting one-in-one-out and one-way user access.

Remote maintenance & management - Greatly reduce the need of physically visiting site by enabling your security system to be controlled and maintained remotely. This includes access control, CCTV and intruder alarms.

Temperature measurement - Allow entry based on any combination of face recognition, body temperature, mask detection and card / fob entry. Use cameras to identify people that could be at risk.

Security solutions for the 'New Normal'

Density Control - People Counting Solutions provide an automated solution to manage occupancy levels. Detect how many people are present in the targeted area and display figures in real-time on digital displays and/or a central management location.

Network Audio - Audio is a key method of communication when it comes to achieving Coronavirus (Covid19) guidelines. High-quality network audio systems are perfect for security, background music and announcements in stores, schools and most other settings.

Intercom Systems - Provide 2-way communication before allowing entry to ensure site security and safety. Systems include a voice activated intercom with facial recognition and remote operation via PC and smart devices.

Wireless intruder alarm - An award winning wireless security system will help protect your home and business during difficult times. These systems can be managed remotely via an App and can also include leak detection, smoke detection and CO2 detection.
