

Secura Palisade Pro is a complete overhaul of the traditional palisade system, making it more secure and safer than its conventional counterpart. The edges of the profile are folded in making the pale neater, more rigid, and safe to touch. It also uses a patented bolt head protection, mitigating the opportunity to remove the head of the bolt with a chisel. Secura Palisade Pro is an ideal system to be used around schools and nurseries.

Single point

Round Top & Notched

Triple point

Types of pales

There are 3 different pale types available:

Single point—simple yet effective deterrent against climbing.

Round Top & Notched — unintimidating design, ideal for schools.

Triple point—maximum protection, ideal for higher levels of security.

Posts, Rails & Fixings

The unique rail is both light and stronger than standard 90° angle used in traditional systems. Secura Palisade Pro systems includes:

- A sloping top to mitigate intruders gaining a footing in-between pales.
- Anti grab protrusions to mitigate using the rails to assist climbing
- Lightweight construction for ease of installation.

Finish

Pales, Rails and Posts have been submitted to number of precoat processes, are galvanised to BS EN ISO 1461 and can polyester power coated to BS EN ISO 13438. all fixings are fully galvanised.
